

There are many animals that start with the letter E. Some of these animals include the elephant, eel, and eagle. All of these animals are very different, but they all have one thing in common: they are all interesting creatures. Elephants are the largest land animals on Earth. They are very social creatures, and live in herds. They are also very intelligent, and have been known to use tools. Eels are strange-looking creatures. They are long and skinny, and can grow to be over six feet long. They live in the water, and can be found in both fresh and salt water. Eagles are one of the most impressive birds of prey. They have very sharp eyesight, and can spot their prey from far away. They are also very fast, and can reach speeds of over 150 miles per hour.
